PROFESSIONAL SUMMARY

AI Engineering enthusiast with hands-on experience building LLM-powered applications using Python, FastAPI, and modern Generative AI tools. Passionate about backend development, prompt engineering, and scalable AI systems.

EDUCATION

JIMS Engineering Management Technical Campus (JEMTEC), GGSIPU

Bachelor of Technology (Computer Science Engineering)

2023 – 2027

CGPA: 7.57/10

TECHNICAL SKILLS

- **Programming Languages:** Python, Java, JavaScript, HTML, CSS
- **Python:** OOP, File Handling, Exception Handling, JSON, REST APIs, Multithreading, Async Programming, Pydantic
- **Frameworks & Libraries:** FastAPI, LangChain, Pandas, NumPy
- **Generative AI:** LLMs, Prompt Engineering, Few-shot Prompting, Ollama, API Integration
- **Developer Tools:** Git, GitHub, Docker, VS Code
- **Core Subjects:** Data Structures & Algorithms, Object-Oriented Programming, DBMS

PROJECTS

Ask Shubham – AI Recruiter & Portfolio Assistant | [GitHub](#) | [Live Demo](#)

- Developed an AI-powered portfolio assistant that answers recruiter questions about my skills, projects, education, and experience using my resume as context.
- Developed a FastAPI backend integrated with an LLM through the Groq API to generate context-aware responses.
- Implemented resume parsing and structured data extraction to improve response accuracy.
- Designed and integrated a responsive frontend with a REST API for seamless user interaction.
- Deployed the application using Render (Backend) and Vercel (Frontend).

AI Resume Parser | [GitHub](#)

- Built an AI-powered resume parser using Python to extract structured information from PDF resumes.
- Processed unstructured resume data into structured JSON format.
- Implemented modular backend architecture for scalable document processing.
- Used regular expressions for information extraction and field extraction.
- Implemented robust error handling and clean, maintainable code.

LinkedIn Post Generator using LLMs | [GitHub](#)

- Built an AI-powered LinkedIn post generator using Python and the Mistral API to generate professional LinkedIn posts from user prompts.
- Implemented few-shot prompting and prompt engineering techniques to generate consistent, high-quality content.
- Used Pydantic for structured response validation and reliable output formatting.
- Designed a modular Python application with clean separation of prompts, models, and formatting logic.
- Worked with JSON handling, API integration, and robust exception handling to improve reliability.

Relevant Coursework:

Data Structures & Algorithms, Python Programming, Object-Oriented Programming, Database Management Systems, Artificial Intelligence
